

Veeam Backup for Google Cloud

Google Cloud Backup and Recovery

Challenge

Google Cloud provides a robust platform that lets you create and deploy applications without having to maintain your own infrastructure. However, as referenced in the Google Shared Responsibility Matrix, your applications and data still remain your responsibility to secure and protect.

Veeam Backup for Google Cloud delivers native, policy-based protection for reliable recovery from accidental deletion, ransomware and other data loss scenarios. An API-first approach, secure backups, and fill-and file-level restore ensure resilient protection that's easy and cost optimized, which frees up time and resources for strategic IT priorities.

Hybrid- and multi-cloud Veeam users experience:

\$1.1M average annual cost savings

+61% security cost efficiency gains

7x faster recovery for cloud workloads

Key capabilities

Relentless Security

- **Logical air-gaps:** Isolated backups separate protected data from production data
- **Secure access:** Least-privilege IAM and role-based access control (RBAC)
- **Encrypted:** Data integrity through AES 256-bit encryption

Cloud Efficiency

- **Cost-optimized:** Backup lifecycling to object storage, compression and cost forecasting
- **Hybrid ready:** Operationally consistent management across the hybrid- and multi-cloud
- **Service level agreement (SLA) automation:** Policy-based detection and protection via native backups

Fast, Reliable Recovery

- **Recover anywhere:** Cross-project, region and platform* restores
- **Full- and file-level:** Full instance or granular recovery, in-place or as new
- **Simplified recovery:** Wizard-driven, automated and self-service workflows

Latest Release

- **Google Cloud Spanner backup:** Ensure the availability of Google Cloud Spanner databases with granular backup and restores of multi-region replica configurations
- **Granular IAM roles:** Enhance secure access to resources by granting fine grain backup and restore IAM roles on a service-by-service basis
- **Enhanced file-level recovery:** Quickly recover individual files and folders to their original location with easy, wizard-driven search, browse and restore capabilities

*When combined with Veeam Backup & Replication™

Supported Services:

Supported Services

Compute Engine

Persistent Disks

Cloud SQL for MySQL and PostgreSQL

Cloud Storage

Cloud Spanner

“ Veeam Backup for Google Cloud provides an easy-to-use and simplistic, yet powerful and reliable tool for backing up critical VMs and managing the associated costs. ”
